32
```

Ln 21, Col 43 Spaces: 4 UTF-8 CRLF HTML

This screenshot shows the Visual Studio Code editor with the Django project 'LEARNDJANGO' open. The Explorer sidebar on the left displays the project structure, including the 'social_media_home' app and its templates directory. The 'index.html' file is selected and open in the main editor. The code is a Django template that extends 'social_media_home/base.html'. It contains a block of content with a loop for 'homeInfo' items, each displaying a title and content. The status bar at the bottom indicates the current position is Line 15, Column 1.

```
1 {% extends 'social_media_home/base.html' %}
2
3
4 {% block content %}
5 <div class="home">
6   <h1>Home Page</h1>
7   {% for info in homeInfo %}
8   <ul>
9     <li class="home_title">{{ info.title }}</li>
10    <li class="home_content">{{ info.content }}</li>
11  </ul>
12  {% endfor %}
13 </div>
14 {% endblock content %}
15
```

This screenshot shows the Visual Studio Code editor with the same Django project. The 'models.py' file is now open in the main editor. The code defines two Django models: 'ContentAbout' and 'ContentHome', both inheriting from 'models.Model'. Each model has a 'title' field (CharField with max_length=50) and a 'content' field (TextField). The status bar at the bottom indicates the current position is Line 10, Column 5.

```
1 from django.db import models
2
3 class ContentAbout(models.Model):
4     title = models.CharField(max_length=50)
5     content = models.TextField()
6
7 class ContentHome(models.Model):
8     title = models.CharField(max_length=50)
9     content = models.TextField()
10
11 # Create your models here.
12
```

```
# style.css 2 | about.html | base.html | index.html | models.py | views.py x
SocialMediaPlatform > social_media_home > views.py > home
1 from django.shortcuts import render
2 from django.http import HttpResponseRedirect
3 from .models import ContentAbout, ContentHome
4
5
6 # def home(request):
7 #     # return HttpResponseRedirect("Hello MerDooo")
8 #     return render(request, 'SocialMediaPlatform/index.html')
9
10
11 def home(request):
12     home = ContentHome.objects.all()
13     return render(request, 'social_media_home/index.html', {'homeInfo': home})
14
15 def about(request):
16     about = ContentAbout.objects.all()
17     return render(request, 'social_media_home/about.html', {'aboutInfo': about})
```
